

# **The Pixel Depot Showroom Launches with World's highest Resolution Screen**

## **New Industry Facility Provides Outstanding Showcase of latest LED display Technology**

The new 'Pixel Depot' showroom from displayLED features the world's highest resolution commercially available screen. With 1.9mm pixel pitch, the tile uses common cathode technology and a unique LED driver, resulting in stunning high res displays which are also extremely energy efficient.

Launched earlier this year the tile has a brightness of 2000 nits, refresh rate of 1920Hz and 16bit colour processing.

With a minimum viewing distance of just one metre and extremely wide viewing angles without colour shift, the product is ideal for fixed installation applications from TV stations through to shopping malls or any high profile commercial venue.

The product is also available in 2.6 mm and 3.9mm versions.
